

- ~~Outliers~~
- Supervised Learning
- Regression.

OUTLIERS → An outlier is Extreme values in your given column in the dataset.

IQR, boxplot, check domain and get appropriate range

- ⑤ KNN Regressor
- ⑥ ElasticNet Regression
- ⑦ Ridge Regression
- ⑧ Lasso Regression
- ⑨ Xgboost (Extreme Gradient Boosting)

## Linear Regression

getting the best fit line for the given use-case

$$y = b_0 + b_1x_1 + b_2x_2 + b_3x_3 + \dots + b_nx_n$$

$$\text{Profit} = \underset{\substack{\text{intercept} \\ \downarrow}}{b_0} + \underset{\substack{\text{coeffs} \\ \downarrow}}{b_1}(\text{R\&D}) + \underset{\substack{\text{coeffs} \\ \downarrow}}{b_2}(\text{Adm}) + \underset{\substack{\text{coeffs} \\ \downarrow}}{b_3}(\text{Marketing}) + \underset{\substack{\text{coeff} \\ \downarrow}}{b_4}(\text{NY}) + \underset{\substack{\text{air} \\ \downarrow}}{b_5}(\text{Cal}) + \underset{\substack{\text{coeff} \\ \downarrow}}{b_6}(\text{Florida})$$

multiple Linear Regression } multiple features and one label

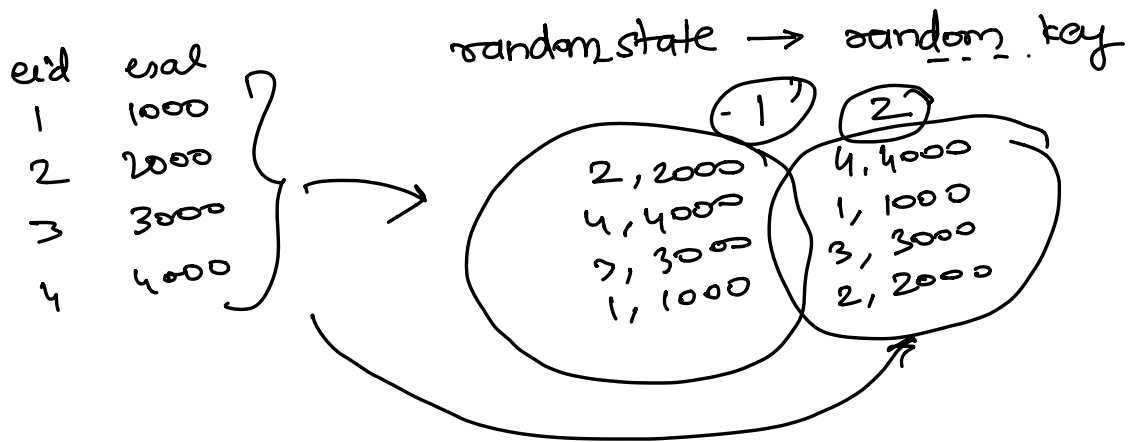

$$\text{Salary} = \underset{\substack{\text{int} \\ \downarrow}}{b_0} + \underset{\substack{\text{coef} \\ \downarrow}}{b_1}(\text{YearsExp}) \quad \left. \vphantom{\text{Salary} = b_0 + b_1(\text{YearsExp})} \right\} \text{Simple Linear Regression}$$

one feature and one label

$$\text{Salary} = b_0 + b_1(\text{YE}) + b_2(\text{YE})^2 + \dots + b_n(\text{YE})^n \quad \left. \vphantom{\text{Salary} = b_0 + b_1(\text{YE}) + b_2(\text{YE})^2 + \dots + b_n(\text{YE})^n} \right\} \text{Polynomial Linear Regression}$$

one feature and one label

degree of features

Equation of linear regression

$$y = b_0 + b_1 x_1$$

$$y = b_0 x_0^0 + b_1 x_1 + b_2 x_1^2 + b_3 x_1^3$$

1	1	1	1
